SOFTWARE ENGINEERING LAB 4: VIBE CODING

Name: Sharanya C Bharadwaj

SRN: PES2UG24CS458 Section: 5H

Game name: Checkers AI Tool Used: Claude

Code prompts: The code files and README were sent along with the prompt

"Im a gamer, this is from a github repo i cloned, attached are the code files
Carefully analyse the tasks , and the current bugs in the game , i will also attach a before version screenshot depicting the moves i played, give me the corrected code with the fixes accordin to the tasks and then we'll move to the testing process

Task 1 — Capture correctness
When a legal capture is made, remove the opponent piece that was jumped. Preserve the moving piece and its destination.
Done when: captured pieces disappear and cannot be captured again.
Task 2 — Win and no-move detection
Detect when one side has no pieces or no legal moves. End the game cleanly in either case.
Task 3 — Complete checkers rules
Add forced-capture behaviour, multi-capture turns, and king movement in both directions. Promotion must occur at the correct back row.
Task 4 — Move-level feedback
Add concise move/capture/promotion feedback. One accepted move should produce one player-facing action result, even if several internal legal-move checks occur.
Required testing
Test ordinary moves, captures, multiple captures, forced captures, promotion, king movement, no-move positions, invalid coordinates, and quitting.**"**

Test Prompts: As I wasn't aware how to play Checkers I used the AI tool to test the necessary test cases

"I dont have to test the win
Test ordinary moves, captures, multiple captures, forced captures, promotion, king movement, no-move positions, invalid coordinates, and quitting.
just give for these enough"
